

AASHISH ANIL

DevOps Engineer | Cloud Infrastructure Practitioner

Kannur, Kerala | +91 9961308229 | aashishanil530@gmail.com | linkedin.com/in/aashishanil

PROFESSIONAL SUMMARY

DevOps Engineer with 1.5+ years of hands-on production experience building CI/CD pipelines, containerized infrastructure, and self-healing systems from scratch — in a company with zero prior DevOps practices. Architected Jenkins automation, containerized Odoo ERP deployments across 12+ client servers, and engineered an n8n + Jenkins self-healing system that eliminated 2am on-call restarts. Reduced client onboarding from 2 days to 2 hours and saved \$3k+ annually through self-hosted infrastructure.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (IAM, EC2, S3, VPC, ECS, ECR), Linode

CI/CD: Jenkins, GitHub Actions

Infrastructure as Code: Terraform

Containerization & Orchestration: Docker, Kubernetes, Helm

Monitoring & Observability: Prometheus, Grafana, Node Exporter, CloudWatch, CloudTrail

Programming & Scripting: Python, Bash

Databases: MySQL, MongoDB

Version Control: Git, GitHub

Tools & Platforms: n8n, Mailcow, SonarQube, Trivy

PROFESSIONAL EXPERIENCE

DevOps Engineer | McMillan Technologies & Consultancy Services *March 2025 – May 2026*

- Introduced CI/CD to a company with zero prior DevOps practices; architected Jenkins automation from scratch for Odoo ERP deployments across 12+ client servers, completely eliminating manual SSH-based releases
- Migrated Odoo + PostgreSQL from bare-metal to Docker, standardizing deployments and enabling rollbacks; cut new client onboarding from 2 days to 2 hours
- Engineered a self-healing incident response system: n8n workflow checks all client URLs every 3 minutes; HTTP 5xx triggers a Jenkins job that auto-restarts the Odoo service — this reduced downtime from hours to under 5 minutes and eliminated weekend on-call
- Replaced Zoho Mail (\$5/user/month) with a self-hosted Mailcow mail server on Docker; provisioned 50+ mailboxes at zero licensing cost and saved \$3k+ annually while maintaining full SPF/DKIM compliance
- Authored Terraform modules for Linode to provision VPCs, firewalls, and compute instances; standardized server setup from ad-hoc configurations to repeatable IaC

Software Development Associate | Copious Infotech *January 2024 – February 2025*

- Designed, developed, and maintained WordPress websites for 8+ clients on a part-time basis, ensuring performance, responsiveness, and cross-browser compatibility
- Managed theme customization, plugin configuration, and content updates across all projects, delivering 100% on time to client specifications
- Pursued cloud and DevOps training at Bsoft, Bangalore alongside client work, building the foundation that led to a full transition into DevOps engineering

Flutter Developer Intern | Maverixpro Technology *July 2023 – January 2024*

- Built 2–3 core UI components for a Flutter mobile application as part of a 7–8 member development team, gaining hands-on exposure to the full app development lifecycle
- Collaborated with fellow interns and senior developers using Git-based version control, contributing to sprint-based feature delivery

KEY PROJECTS

Self-Healing Infrastructure System — n8n + Jenkins

- Built real-time incident response: n8n workflow polls all client URLs every 3 minutes; on HTTP 5xx, sends a Telegram alert and triggers a client-specific Jenkins job to auto-restart the Odoo service
- Implemented an observability stack with Prometheus, Grafana, and Node Exporter for real-time system metrics, dashboards, and alerting

Odoo Docker Migration & CI/CD Platform

- Containerized Odoo + PostgreSQL from bare-metal to Docker across 12+ production client servers; designed Jenkins + GitHub webhook pipelines for zero-downtime automated deployments
- Reduced manual deployment effort by 80%+ and cut new client onboarding time by 95% (2 days to 2 hours)

Cloud Infrastructure Automation — Terraform + AWS / Linode

- Built reusable Terraform modules to provision VPCs, firewalls, compute instances, EC2, load balancers, and auto-scaling groups; standardized infrastructure across environments

ML Model Deployment Pipeline — GlauDec (AI Glaucoma Detection)

- Built and containerized a Python-based ML pipeline for glaucoma detection using fundus images; applied GitHub Actions CI/CD to automate model build, test, and deployment with versioned Docker Hub images

DevSecOps Pipeline — BoardGame Application (Practice Project)

- Built a secure Jenkins CI/CD pipeline for a Java Maven app with SonarQube quality gates and Trivy vulnerability scanning at both filesystem and image level; deployed via Kubernetes Helm charts

CERTIFICATIONS

- Jenkins — KodeKloud (September 2024)
- Docker and Kubernetes Masterclass — Udemy (March 2024)

EDUCATION

Bachelor of Technology in Computer Science *2019 – 2023*

St. Thomas College of Engineering and Technology
